Syncycle
Sprint 3 Review

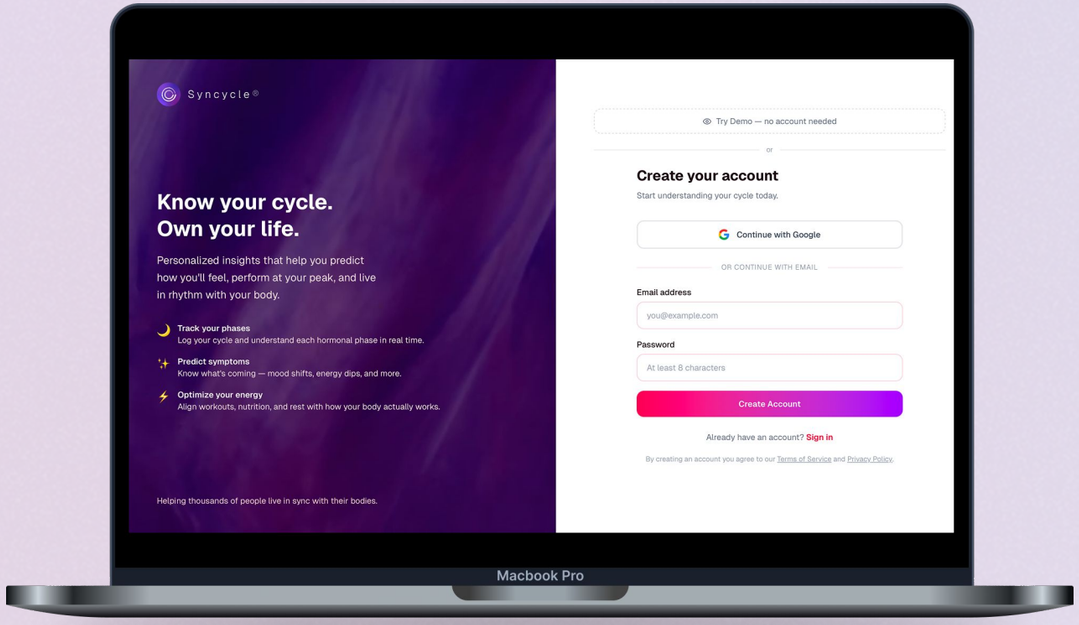
Made with GAMMA

Main Goal:

💻 ***Have a usable MVP***

Definition of Done:

- **Backend:**
- Implement signup and login
- Create user account structure with onboarding questions
- Secure storage for user data
- Store responses in Database
- Save logs to database and display previous logs (API side)
- **Core Logic:**
- Build cycle phase calculation logic
- Map advice to 4 cycle phases
- Look at specific categories for prediction
- **Frontend:**
- Implement Onboarding Questions UI
- Show current cycle and advice data
- Display cycle phase and generate upcoming phase to user



We have a domain now :) https://syncycle.app/

Further Goal:

💬 ***Complete Business Model***

Corporate wellness programs for businesses

💡 These numbers are early assumptions based on benchmarks from consumer apps like Flo, Calm, and Headspace, and will be validated once we start acquiring real users.

Early Unit Economic (Assumptions)

Metric	Benchmark*	Syncycle assumption
CAC	€20–70	€30
CLV	€80–250	€90**
CLV:CAC	3–5x	3x

* Benchmarked with Flo, Clue, Natural Cycles, Calm, Headspace

** Assumption: €4.99/month subscription, 18 months avg. retention

CAC Calculation

- Paid mobile ads typically cost €2–€4 per install
- Only ~1–2% of installs convert to paid users (consumer app benchmark)
- Our launch relies heavily on organic channels:
  - university communities
  - social media content
  - Reddit
  - Product Hunt
- Paid ads support growth but are not the main acquisition channel *(for early launch)*

Made with GAMMA

Sprint 4 Planning (13th -19th March)

Onboarding → get first 5 real costumers (non-paying)

- User feedback & put into the next sprint
- “Mum Test”
- User Interviews based on MVP (Distribution)
- Falsify and verify LOF assumptions:

Marketing & MVP Sub- Goals

LOF Assumptions

1. Women are willing to pay for a dedicated cycle-based optimization tool.
2. Women want daily guidance and would use the app every day.
3. Women trust the product enough to log intimate, personal health data.
