

Syncycle

Sprint 4 Review

Progress update on research, design, and go-to-market strategy for our AI-powered women's cycle companion.

Competitor Analysis: App Store Reviews

A review of competitor app store feedback revealed consistent, recurring frustrations. Our biggest opportunity: be the app that respects users instead of monetizing them.

Monetization Friction

Excessive ads and aggressive upsells to premium push users away before they see real value.

Inaccurate & Inflexible

Algorithmic predictions feel out of touch — users want to input their own data, not be told how to feel.

Privacy & Noise

Data selling concerns, unskippable push notifications, and no chatbot toggle are top disengagement triggers.

Missing Features

Users want partner invites, offline mode, and less clutter — simple but unmet asks across the market.

📌 **Key Takeaway:** Speak to women outside a gym. Nail the first-month UX to build lasting tracking habits.

User Interviews: 10 Conversations, Clear

Themes

We spoke with 10 women about their relationship with cycle tracking apps. The findings pointed to a core tension: **control vs. prescription**.

They Want Control

Users want to tell the app what to do — not the other way around. Being "dictated to" about hormonal choices was a top reason for deletion.

Selling, Not Supporting

Many apps feel like storefronts. Excessive ads and generic product recommendations erode trust quickly.

Notification Overload

Too many push notifications — combined with paywalls — were the most common reasons for disengagement.

Some Just Use a Calendar

A subset of users skip apps entirely. This is our opportunity: offer just enough structure to earn their trust without friction.

Cycle-Aware Workouts

Women do adjust exercise intensity based on their cycle phase — especially during their period. This is a validated use case.

Context Matters

Generic recommendations (e.g., menopause content surfaced by age alone) feel tone-deaf. Timing and relevance are everything.

Live Onboarding: Our First 5 Users

Website Update

Live soon at syncycle.app 💜

What's New

The refreshed landing page communicates our core promise clearly: an AI cycle companion built to help you **understand your body — not sell to it.**

- Dashboard preview embedded above the fold
- Demo email capture for early access signups
- Pricing & Testimonials Sections
- Clean, dark UI reinforces trust and premium feel

Polished MVP

UI

On Brand Design

We have adjusted the design of our MVP to reflect the brand and positioning.

Further Improvements Planned

More improvements to be implemented in Sprint 5, based on the findings from the user interviews and onboardings.

Advanced Settings

Users are now able to disable Trackers and control AI access to different data through Settings

Distribution & Early Awareness Strategy

Event Marketing	Social Media	SEO Strategy
<i>Three main focus areas:</i> • Leveraging events at CODE (e.g. flyers & networking) • Our own Female Health / FemTech Event in April • Berlin-based meetups/socials/run clubs	<i>Posts on:</i> • Cycle Science & Education • Cycle-Based Lifestyle Optimization • Women's Health & Data Privacy	• Pillar pages • Keyword based articles • Internal linking • Indexed key pages • XML sitemap

 **a concrete campaign plan & first event prep to be executed next Sprint**

Join Early Access

We're inviting our first users to experience Syncycle before the full launch. Early access members help shape the product — and we really appreciate your feedback 🤝
