

# Sprint 4 (13th- 19th March)

## Sprint 4 (13th- 19th March)

### Main Goal:

#### Onboarding → get first 5 real costumers (non-paying)

- user feedback: integrate regular feedback loops with the first costumers to put into the next sprint
- Everyone knows about the "Mum Test" and we use the principles
- User Interviews based on MVP (Distribution)
- Falsify and verify LOF assumptions:

### LOF Assumptions

- 1. Women are willing to pay for a dedicated cycle-based optimization tool.**

This is critical because the business model depends on it. Engagement without monetization is insufficient.
- 2. Women want daily guidance and would use the app every day.**

Daily use is essential for retention, habit-building, and long-term value. If daily engagement doesn't happen, the product loses relevance quickly.
- 3. Women trust the product enough to log intimate, personal health data.**

Without trust, no meaningful personalisation or predictive insights are possible — making the core value proposition impossible.

### Tasks for Sprint 4

### Further Goals:

- On the MVP:
- SEO
- Scientific Research put into algorithm (create knowledge base and chunks) -at least 5 medical papers on training, eating etc.
- Voice agent
- Marketing:
- have an instagram and a tik tok account
- campaign plan
- networking plan

#### **Hackathon preparation:**

- have an extra meeting on that: What do we want to have until then (2 weeks left) and what we want to do that day(s).
- !prepare a short description of their product (one paragraph) and one photo (of the team or the product; be creative) by **Monday morning** (09:00 AM).

#### **Test: By 18th of March**

- do the Scrum Open | Scrum.org exam
- create a document per team with your scores
- add in the documents the questions that you would like to discuss from the Scrum open

Expectation for the Hackathon

What should we focus on in the next 2 weeks.
